The Reality

It is undeniable that despite being the most populous country in Africa with the largest economy, our dear nation grapples with low literacy rates, where only 59% of the adult population possesses the ability to read and write.

Absence of scholarship opportunities to Nigerians has been identified as one of the numerous reasons for the low literacy rates in the country.

You might ponder: 'How would a scholarship make a difference? Can it truly reduce the high rates of illiteracy, unemployment, and other vices plaguing the country?'

While a scholarship may seem modest, its absence has contributed significantly to the challenges faced by many aspiring individuals in Nigeria.

The impact of low scholarship opportunities is evident in the persistently low literacy rate, high unemployment rate, and increasing number of societal vices.
